

# AINTREE UNIVERSITY HOSPITAL

Aintree University Hospitals NHS Foundation Trust was a British public sector healthcare provider responsible for managing the Aintree University Hospital in Fazakerley, Liverpool, England.

The atrium needed wall lighting to better illuminate the room as well as showcase the wonderful artwork.

Ansell's minimalistic [Doppio HP LED](#) were installed along the walls which proved to be a shrewd choice for its easy on the eye design, build quality, and surprisingly great power.

Ansell's amenity range is jam-packed with great LED solutions and our Doppio is amongst the most popular. As with all Ansell Lighting products, we design and manufacture our solutions with reliability and quality at the very core.

We took a design-driven approach to the creation of the Doppio. Ensuring that it could blend seamlessly within any scene. We adopted a minimalist approach, and the results were a striking die-cast aluminium construction with graphite paint finish which sets it apart.

The Doppio is widely respected for its great design. However, it strikes the perfect balance between form and function. For all its fantastic looks, it has the power to match.

The Doppio HP LED is high performance architectural bi-directional wall light. It exceeds the performance of a 150W Metal Halide and features a 20° beam angle.

It comes with an impressive LED lifespan L70 50,000 hours and two-year warranty period.

The team at Aintree University Hospital were incredibly pleased with the results. The Doppio HP LED has a CCT of 4000k which generates a more visually friendly neutral white which the building staff hugely admire.

Overall, the Doppio HP LED provided the project with a great value for money LED solution. It's minimalistic design, reliability, quality and power makes for a great solution.
